

This book takes an empirical approach to language processing, based on applying statistical and other machine-learning algorithms to large corpora. Methodology boxes are included in each chapter. Each chapter is built around one or more worked examples to demonstrate the main idea of the chapter. Covers the fundamental algorithms of various fields, whether originally proposed for spoken or written language to demonstrate how the same algorithm can be used for speech recognition and word-sense disambiguation. Emphasis on web and other practical applications. Emphasis on scientific evaluation. Useful as a reference for professionals in any of the areas of speech and language processing.

Lusitania - An Epic Tragedy, Optometry Law, Integrating Facebook iOS SDK with Your Application, Mastering ServiceNow - Second Edition, Geoffrey Beene: The Anatomy of His Work, A Dog Lovers Collection (French Edition), The Passion Series: Books 1-3 Box Set, The Race for Hitlers X-Planes: Britains 1945 Mission to Capture Secret Luftwaffe Technology, NYX: No Way Home,
